

Assignment – 13

Using the UNION clause.

1) Create a union of two queries that shows the names, cities, and ratings of all customers. Those with rating of 200 or greater will also have the words “High Rating”, while the others will have the words “Low Rating”.

```
mysql> select Cname, city, concat((rating),' High Rating') as Rating from customers where rating >=200
```

-> Union

```
-> select Cname, city, concat((rating),' Low Rating') as Rating
```

```
from customers where rating <200;
```

```
mysql> select Cname, city, concat((rating),' High Rating') as Rating from customers where rating >=200
-> Union
-> select Cname, city, concat((rating),' Low Rating') as Rating from customers where rating <200;
```

Cname	city	Rating
Giovanni	Rome	200 High Rating
Liu	San Jose	200 High Rating
Grass	Berlin	300 High Rating
Cisneros	San Jose	300 High Rating
Hoffman	London	100 Low Rating
Clemens	London	100 Low Rating
Pereira	Rome	100 Low Rating

7 rows in set (0.00 sec)

2) Write a command that produces the name and number of each salesperson and each customer with more than one current order. Put the results in alphabetical order.

3) Form a union of three queries. Have the first select the snums of all salespeople in San Jose; the second, the cnums of all customers in San Jose; and the third the onums of all orders on October 3. Retain duplicates between the last two queries but eliminate any redundancies between either of them and the first.

(Note: in the sample tables as given, there would be no such redundancy. This is besides the point.)
